Professional Summary

Microsoft Dynamics 365 CRM Consultant with 3+ years of experience delivering enterprise solutions using Dynamics CRM, .NET, Power Platform, and Azure services. Skilled in CRM customization, plugin development, business process automation, integrations, and data migration. Strong expertise in Power Apps, Power Automate, and Copilot Studio for building AI-driven automation and productivity tools. Proven ability to manage end-to-end CRM implementations, integrate external systems, and optimize business processes across Sales, Operations, and Customer Service.

Technical Skills

CRM & Power Platform:	Dynamics CRM 2011/365, Power Apps, Power Automate, Workflows, SSIS, SSRS
Development:	C#, .NET, Plugins, Custom Workflows, JavaScript, HTML, CSS, Bootstrap
Integration:	REST APIs, SOAP, Azure Functions, SharePoint, External DB Sync
Database:	SQL Server, MySQL
AI & Copilot:	Copilot Studio, Azure OpenAI, Prompt Engineering, Conversational Automation
Tools:	XRM Toolbox, Plugin Registration Tool, Visual Studio, Power BI

Professional Experience

SkySoft Connections — Senior Microsoft Dynamics CRM Consultant

Sept 2024 – Present — Islamabad, Pakistan

- Designed and implemented CRM solutions tailored to Sales, Operations, and Customer Service workflows.
- Developed custom plugins, workflows, and automation using C# to meet complex business needs.
- Conducted large-scale data migration using SSIS with full data validation and exception handling.
- Integrated CRM with external systems to streamline communication and process automation.
- Developed SSRS reports and dashboards to provide actionable insights for business teams.
- Built Power Apps Canvas applications to modernize and automate internal processes.
- Created Power BI dashboards for KPI tracking and decision-making.
- Automated business processes using Power Automate to improve efficiency and reduce manual work.

SkySoft Connections — Microsoft Dynamics CRM Developer

Sept 2023 – Sept 2024

- Contributed to the design, development, and testing of CRM modules for multiple enterprise clients.
- Developed custom workflows, plugins, and automated test routines in C#.

- Performed data migration using SSIS and automated CRM processes using Power Automate.
- Implemented integrations between CRM and external systems for real-time data exchange.

Major Projects

RFQ (Clark Seals) Project

At Clark Seals, I delivered a complete RFQ management system using SharePoint, Power Apps, and Power Automate. I designed structured SharePoint lists with metadata, version control, and automated record creation. I built a Power Apps Canvas App enabling engineers and sales teams to create and update RFQ records with seamless navigation and validation. I also implemented multiple Power Automate flows for assignments, user notifications, Excel-to-SharePoint synchronization, and automated duplicate detection. These improvements significantly reduced manual effort and streamlined the RFQ lifecycle across departments.

RSA – Copilot Dynamics CRM Integration

For RSA, I implemented advanced Copilot automation using Azure OpenAI and Copilot Studio to modernize their CRM operations. I created AI-driven agents that automatically categorize attachments and move them to SharePoint based on type, eliminating manual processing. I developed intelligent flows that generate draft email responses, create case IDs, and assist support agents by analyzing customer messages. The integration combined CRM triggers, generative AI prompts, and contextual workflows to enhance user productivity and reduce processing times across support operations.

NetCom Learning Project

At NetCom Learning, I designed and customized a complete Dynamics 365 Sales solution aligned with complex business processes. I implemented custom entities, business rules, workflows, plugins, web resources, and custom APIs for seamless data synchronization with external systems and the corporate website. I also developed integrations with RingCentral for communication tracking and Marketo for lead management. Additionally, I configured advanced security roles, dashboards, and Power Automate flows. This resulted in a highly scalable CRM architecture supporting sales operations, product catalog management, and automated lead handling.

Mimojo CRM Solution

For Mimojo, I customized the Dynamics 365 Sales module to streamline lead intake, merchant onboarding, and opportunity tracking. I implemented structured Business Process Flows (BPFs) to ensure consistency and compliance across sales stages. I integrated DocuSign for automated contract signing and built custom APIs for real-time synchronization with external portals. Automated reports and stage-duration tracking were added to improve transparency and performance monitoring. These enhancements reduced manual work, improved onboarding speed, and enabled data-driven decision-making.

Oil & Gas Inspection Management System

I designed an end-to-end inspection management solution covering the full lifecycle from RFQ to Job Completion. The system automated lead creation from RFQ emails, inspection assignment, opportunity qualification, and quote generation. I built two-way integration with the LGI inspection system for real-time data synchronization. Custom plugins, workflows, and Power Automate flows handled approval logic, inspector allocation, document processing, and job creation. I also developed dashboards for RFQ tracking, Sales/Operations monitoring, and Inspector Certificate compliance. This solution transformed operations by improving efficiency, reducing delays, and enhancing process visibility.

Education

Bachelor of Science in Economics

University of Science and Technology Bannu — 2018 – 2022

Intermediate in Computer Science (ICS)

UST Bannu — 2016 – 2018

Languages

English (Fluent), Urdu (Native), Pashto (Native)
